A Few Notes about the Tektite

The Tektite is design for use at sites that do not require much or any forward speed. Although it offers excellent stability and a very low rate of descent it is principally intended for use over water. The maximum suspended weight is 200lbs. Because the Tektite's pack volume is significantly smaller than any BASE specific Ram Air, we manufacture a special version of our Perigee Hatness and Container System designed to properly fit the Tektite. Please contact us for further information reagarding this tiny rig.

The standard color pattern for the Tektite is diagramed below. Two colors are used on alternating gores to facilitate easier packing. If you have a custom request please contact us or indcate it below. There may be a fee for some custom patterns.

COLOR A: _____

COLOR B: _____

BASE jumping is a hazardous and unproven sport. Consolidated Rigging and all of it's affiliates do not advocate anyone participate without accepting the possibility of severe injury or **death**. Moreover, Consolidated Rigging makes no warranty express or implied as to the reliability, suitability or safety of any product it sells. I (purchaser) accept the above statements and realize this equipment is sold without any guarantee of performance or quality. Signed: _____
